Promoter datasets by study

18 eligible datasets in 12 clusters · 8 excluded · 2 external resources

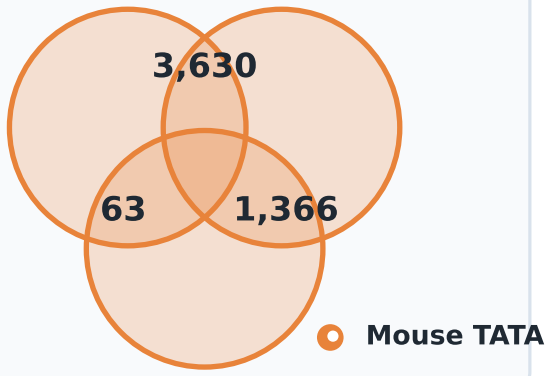

CNNProm study
CDBProm study
GraphPro study (excluded)

eukaryote
prokaryote

cnnprom-mammal

single study · 3 datasets

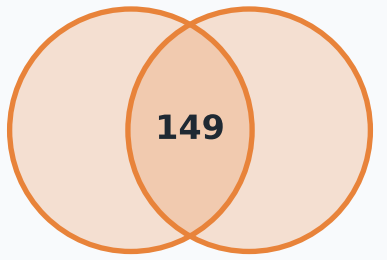

Human non-TATA **Mouse non-TATA**

cnnprom-arabidopsis

single study · 2 datasets

non-TATA **TATA**

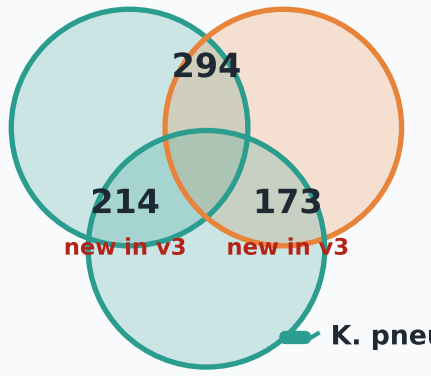

Arabidopsis thaliana

enteric-cross-source

cross-study · 3 datasets

S. Typhimurium **E. coli**

bacillus-cross-source

cross-study · new in v3

B. amyloliquefaciens

8 singleton clusters

one CDBProm dataset each · no pair above the 10-record threshold

GraphPro: 8 datasets excluded

kept for provenance; not in any cluster until rebuilt from verified references

Human
negative lineage unverified

Mouse
negative lineage unverified

B. amyloliq.
class = strand; 535 negatives are CDBProm promoters

C. jejuni
class = strand

C. pneumoniae
class = strand; organism mislabelled

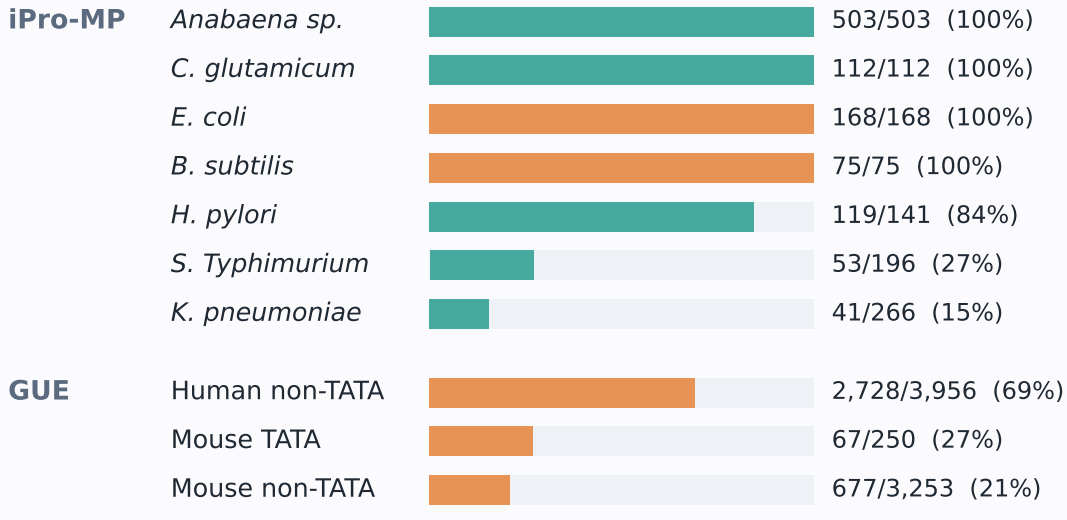

E. coli
1,345 records in both classes

L. interrogans
class = strand

R. capsulatus
class = strand

External resources: overlap with eligible test sets

test positives with a neighbour in the resource · bar colour = study of the test set

Numbers in overlaps: records with a neighbour in the other dataset (MMseqs2, ≥80% identity, ≥80% coverage, either strand; train and test pooled).

Pairs with more than 10 such records share a cluster. Circle areas are not proportional to dataset size. Sources: F-108, F-109, F-114, R-033, dataset eligibility manifest.
