Dataset dependency clusters

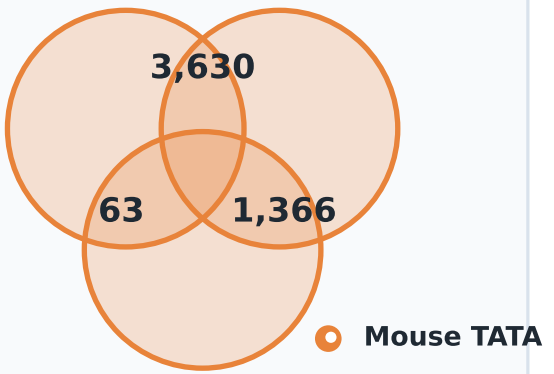
18 eligible datasets · 12 clusters · dataset_dependency_manifest_v3

CNNProm study
CDBProm study
eukaryote
prokaryote

cnnprom-mammal

single study · 3 datasets

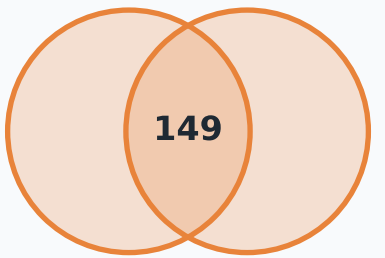
Human non-TATA
Mouse non-TATA



cnnprom-arabidopsis

single study · 2 datasets

non-TATA
TATA

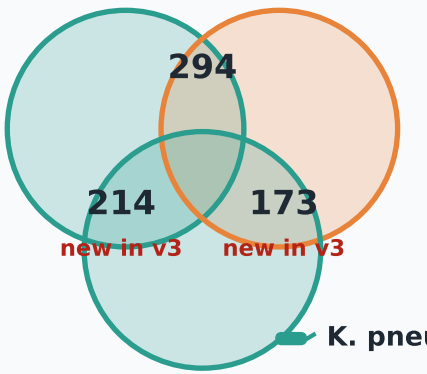


Arabidopsis thaliana

enteric-cross-source

cross-study · 3 datasets

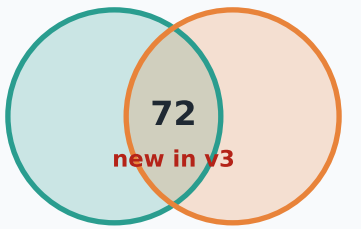
S. Typhimurium
E. coli



bacillus-cross-source

cross-study · new in v3

B. amyloliquefaciens



8 singleton clusters

one CDBProm dataset each · no pair above the 10-record threshold

Numbers in overlaps: records with a neighbour in the other dataset (MMseqs2, ≥80% identity, ≥80% coverage, either strand; train and test pooled).

Pairs with more than 10 such records share a cluster. Circle areas are not proportional to dataset size. Sources: F-114, R-033.
